

# iKeyp<sup>®</sup> PRO

## WI-FI CONNECTED

By connecting the iKeyp Pro to the internet via Wi-Fi, it communicates in real-time to provide security alerts and intelligent medication reminders via text, email or the iKeyp smartphone mobile app.

## REMOTE OPEN

Remote open the safe door from anywhere or have customer service open it up for you in the event you misplace your keys and forgot your code.

## SMARTPHONE ALERTS

Because access to medications is critically important, a pair of backup keys are provided with each safe in case of emergency.

## 24/7 MONITORING

For individuals who prefer not to use a smartphone or cannot connect the safe to the internet, the iKeyp Pro has both audible and visual alerts that can be seen and heard directly from the unit.

## DIGITAL COMBINATION

The iKeyp Pro provides for a custom, user-programmable 4 to 8-digit access code via the easy-to-use waterproof digital touch-sensitive keypad.

## NO-TOOL INSTALLATION

The patented expandable wing system provides the user with an unparalleled range of fast, simple and secure installation options.

# Advanced Technology Features

## AUTOMATIC SOFTWARE UPDATES

The iKey Pro has been engineered with sophisticated communication intelligence that will automatically update the software on the safe to provide new features and enhancements as they are developed in the future. This built-in functionality will allow the safe to adapt to various user needs that have yet to be uncovered. Now that is SMART!

## IKEYP MOBILE APPLICATION

The mobile application provides a multitude of notifications to users such as security alerts and medication reminders. These notifications can be extended to roommates, loved ones or caregivers as additional oversight to security and medication adherence.

From the mobile application, users can manage their safe, reminder and account settings in addition to having quick access to notification history and a convenient user dashboard.

Leveraging the iKey Smart Safe inherent Internet of Things (IoT) capabilities, users can also grant physical access to third parties by either remotely opening the safe door or changing the access code on demand... all from anywhere around the world in real-time.
